Pricing

Suggested retail for Managed Security Solve:
people, private servers and filtered networks

Price list · November 2026 · Canadian dollars

PRICING

One price per person. Everything included.

Security Solve is sold and supported by IT providers; Technology Solve is the first. These are the suggested retail prices, and what Technology Solve charges for Managed Security Solve. Three things are priced: the people you protect, a private server if your company wants one, and any networks you filter through a router. Canadian dollars a month, before tax; your provider sets the final price.

$12
per person a month, or $120 a year

$69
a month for a Small private server

$39
a month for a filtered network

0
appliances, add-on consoles or extra licences

What you pay for

Unit	What it covers	Suggested retail
A person	One person and every device they use, up to five: Windows PC, Android phone, and iPhone, iPad or Mac through a secure VPN profile. Everything in Security Solve, the company portal, and your provider's onboarding and support.	**$12** a month, or $120 a year
A private server	A dedicated Security Solve server for your company, with office links to your sites, company DNS, Office Exit and access logging. Optional; most companies with an office want one.	**$69 / $129 / $249** a month by size
A filtered network	A router or firewall pointed at Security Solve DNS, so every device behind it is filtered with nothing to install: guests, students, TVs and printers.	**$39 / $99 / $249** a month by size

What counts as a person

- **One seat per person**, however many devices they use, up to five.
- **A server, kiosk or shared device** with no one behind it counts as one seat.
- **Office gateways and routers never count.** Neither do guest or IoT devices behind a filtered network; that is what the network price covers.

Try it first. Organisations get 30 days of full protection when their provider sets them up; individuals who install the app get 14 days. When a trial ends, the app's on-device scanner, Link Checker and Breach Monitor stay free; Shield and the portal need a plan.

PEOPLE

Managed Security Solve: $12 per person a month

One plan for organisations, with everything in it, sold and supported by your IT provider. Minimum five people. Pay monthly, or $120 a person a year (two months free).

Shield VPN with filtering

An always-on encrypted tunnel that blocks malware, phishing, ads and trackers for every app, on every network, on every device the person uses. No browsing logs.

Malware and phishing protection

Every app and download scanned, new installs checked within seconds, fake updates and banking trojans caught. Link Checker before anyone clicks; 1.8 million+ malicious sites blocked.

Breach Monitor and Wi-Fi Guard

Work email addresses checked against known breaches daily. Open or weak Wi-Fi gets a warning with one-tap Turn on Shield.

Live Threat Map and health score

See where a device's connections go and what Shield blocked. Antivirus, encryption, firewall, updates and screen lock scored 0 to 100.

Company portal

Your IT contact sees servers, people, devices and threats blocked, adds staff, resets passwords, blocks a lost laptop, and downloads a monthly report.

Microsoft 365 sign-in

Staff sign in with their work account and join your organisation automatically. Two-step verification for administrators.

Your rules

Block whole categories, add up to ten lists of your own, keep an allow list that always wins, and decide whether devices may reach printers and file servers on local networks.

Access that depends on health

An infected, outdated or unhealthy device is restricted automatically and the person is told how to fix it. Access returns by itself when the device is healthy.

Every platform

Windows 10 and 11 and Android apps. iPhone, iPad and Mac get a secure VPN profile for the free OpenVPN Connect app.

Set up and supported by your provider

Protected the same day. Security Solve keeps the platform monitored, updated and backed up nightly, with a hot standby that takes over by itself; first-line support comes from the IT provider you already know.

PRIVATE SERVERS

Your own server, sized for your company

A private server is a dedicated Security Solve server that only your people can see. It is how staff reach the office without anything at the office being exposed, and it is where company DNS, Office Exit and access logging live.

Size	People	Office links	A month	Typical
Small	up to 25	1	**$69**	A single office, or a home office.
Standard	up to 100	up to 5	**$129**	Most companies with more than one site.
Large	up to 500	unlimited	**$249**	Multi-site, or the whole company on its own server.
Additional office link		+1	**$19**	When one more site is cheaper than the next size.

Every size includes

- A dedicated WireGuard and DNS server in Security Solve's Canadian cloud, or in your own cloud account or on your own hardware (Proxmox, Hyper-V, VMware) for the same price. You keep data residency; we keep it running.
- Office links: a small gateway at each site dials out to your server, so the office opens no ports and needs no static IP. Gateways run on Linux, Windows Server, pfSense, OPNsense or MikroTik.
- Least privilege: give staff the whole office or only the machines you list, and link offices to each other one way, exactly as listed.
- Company DNS: internal names like **rds.company.local** work over the VPN exactly as they do in the office.
- Office Exit: staff on the road browse from the office's own internet address, for banks and portals that only let the office in.
- Access logging, off by default, with your own retention and a copy to your own cloud storage. Your people are told in the app when it is on.
- Failover to the shared servers if your server is ever unreachable, and encrypted nightly backups.

For comparison, NordLayer charges about C$56 a month for a dedicated server on top of its seats, and GoodAccess about C$68 a gateway, with no office links, company DNS or filtering included.

FILTERED NETWORKS

Secure DNS for a whole network, nothing to install

Point the network's router or firewall at Security Solve and every device on it is filtered: staff, guests, students, TVs and printers. Priced by the size of the network, not by the people on it.

Size	Devices behind the router	A month	Typical
Small network	up to 50	**$39**	A clinic, a shop, a small office with guests and printers.
Medium network	up to 250	**$99**	A school, a hotel, a mid-size office.
Large network	up to 1,000	**$249**	A campus, a large hotel, a venue.
Beyond 1,000 devices		quote	About $0.20 a device a month.

Includes categories (adult content, gambling, social media, games, VPN and proxy bypass and more), up to ten imported lists, an allow list that always wins, blocked counts in the portal, automatic updates for a changing public IP, and guides for pfSense, OPNsense, MikroTik, SonicWall and F5. Only your registered networks get answers, so it is never an open resolver. Per-lookup access logs need a private server.

For comparison, DNSFilter charges about C$7 per access point a month for guest Wi-Fi, so a 20-access-point hotel pays about C$140; CleanBrowsing about C$70 a month for Wi-Fi providers under 100 access points.

PUTTING IT TOGETHER

What a company actually pays

A 40-person company with two offices

		A month
40 people on Managed Security Solve	40 × $12	$480
Standard private server	Up to 100 people and 5 office links; both offices linked	$129
Total	No appliance, one portal, set up and supported by your provider	**$609**

Bought as separate products at list prices, the same protection is Twingate Business or NordLayer Core for office access (about C$14 to $15 a person), DNSFilter (about C$3) and Bitdefender GravityZone (about C$4 to $7 a device, two devices a person): roughly **C$25 to $32 a person**, so $1,000 to $1,300 a month for 40 people, across three consoles, before anyone is paid to manage them, and still nothing that gets staff into the office without an exposed VPN.

How billing works

Who sells it	Security Solve is sold through IT providers; Technology Solve is the first. Suggested retail is what Technology Solve charges for Managed Security Solve; other providers set their own price.
Currency and tax	Canadian dollars, before applicable taxes. Your provider bills you monthly or annually.
Monthly or annual	$12 a person a month, or $120 a year (two months free). Private servers and networks are billed monthly.
Minimum	Five people. Smaller teams are welcome at the five-person price.
Adding and removing people	Add people any time; they are billed from the month they join. Remove someone and the seat is free for the next person.
Your own cloud or hardware	Same price. You pay your cloud provider; we run the server.
Changes	Ask your provider, or choose Request a change on the Billing page of your company portal.

Get started. Talk to Technology Solve, or ask your own IT provider for Security Solve, and your team is protected the same day: your organisation, Microsoft 365 sign-in, your private server and your office links. securitysolve.ca · techsolve.io

Suggested retail prices as of November 2026; they may change, and your agreement with your provider sets your price. Competitor figures are published list prices converted to Canadian dollars at the time of writing.
